

# High-performing and multipurpose

Bucher FlexLine® CM120 is a high-performance combination sewer cleaning vehicle designed for demanding tasks. With a spacious tank, powerful jetting and vacuum pumps as well as smart storage solutions, it delivers both top-class performance and operational reliability. The combination of low fuel consumption, minimal maintenance costs and flexible functionality makes this system an efficient and economical investment that has become a favourite among customers worldwide.

## Multiple applications

Private and Industrial tasks

# Bucher FlexLine® CM120

Flexible and reliable combination unit that outperforms most private and industrial cleaning tasks.

# Flexible tank volume

A movable partition divides the tank in two dynamic water / sludge volume compartments.

The partition can be moved during the day to adjust to the operator's need for water or sludge volume in the tank, increasing the flexibility of applications. The Bucher FlexLine® CM120 tank can hold up to 11.7 m³ of water and up to 10.5 m³ of sludge when the partition is positioned on each end. This means less trips to refill or empty the tank, saving time and increasing productivity.

# Strong service support

At Bucher Municipal, we take our commitment to keeping your vehicles on the road seriously.

Our industry-leading service network, supported by over 70 factory-trained engineers, has a market leading first time fix rate and it ensures that expert assistance is always within reach.

With six strategically located service centres across the UK, a global parts centre offering next-day delivery, and a comprehensive range of Repair & Maintenance packages, we provide seamless support to keep your fleet running efficiently with less down time and reduced maintenance costs.

We use only Original Equipment Manufacturer (OEM) parts for all maintenance, repairs, and routine servicing, guaranteeing optimal performance and reliability. As the OEM and industry experts, we are uniquely positioned to support your vehicles with an extensive £7M+ stock of original parts, ensuring unmatched availability and quality.

# Designed to perform. Built to last.

Bucher's sewer and drainage equipment is built to last — and it shows in the consistently strong residual values our machines keep, often exceeding 50% at trade-in, even after years of use.

Thanks to an exceptional build quality, our superstructures tend to outlive their chassis, making remounting a smart, reliable, and cost-effective option for fleet owners.

This not only supports a robust pre-owned market but also provides added value for customers looking to finance new equipment by trading in their existing units.

Even after years of use, our equipment continues to perform reliably, offering consistent returns both in operation and at resale, lowering the total cost of ownership.

Whether you're upgrading, expanding, or optimizing your fleet, investing in Bucher means choosing long-term performance, financial flexibility, and maximum value retention.

Bucher's sewer and drainage equipment is designed to support your business today — and keep delivering value well into the future.

**Tank**  
13.6 m³ gross volume tank with 0.5 bar operating pressure. A movable partition inside keeps water and sludge separated.

**Jetting pump**  
Piston pump with a capacity of 392 l/min @ 145 bar for high-pressure jetting with the hose reel.

**Vacuum pump**  
Water cooled pump with 942 cfm suction capacity for performing tough jobs without a problem.

**Make it your own**  
Customize the operator's workspace from cabinets, equipment, and accessories to paint colour and signwriting.

**Controls**  
Intuitive and heavy duty control panels with functions automated by CANBUS controller.

**End cover**  
Bucher design consisting of a hydraulically-assisted locking mechanism without manual locks for increased safety.

**Top suction**  
A valve on the rear end cover connects to a pipe going into the top of the tank for suction directly into the tank.

**Cassette suction**  
Hydraulically operated cassette arm with 5" hose, 2 m telescope extension, and 45° lift.
